

Our Story

In 1980, Ernie Miyamoto entered into the hot rod industry. After gaining experience while working with his father, he decided to go out on his own and start what has now become MotoFab. MotoFab was created with a focus on custom headers and exhaust. Now it has turned into custom fabrication of not only headers and exhaust, but frames, cages, sheet metal work and complete vehicle builds.

Starting out with fabricating and customizing his first car (which he still owns today), Ernie has worked on and fabricated some really unique vehicles from Corvettes and LaSalle's, to mud trucks and mini bikes. Tasks as simple as welding an aluminum bracket or challenges as complicated as fabricating a full chassis, Ernie has the talent to take on a project, access it and complete it while giving it enough character to make it stand out.

Our safe and secured 3400 sq. ft. facility is equipped with two Bridgeport mills, two lathes, a 4' x 16' surface plate table, two English wheels, four car hoists and other metal forming tools needed to complete your project.

Custom Headers

All our headers are made from mandrel bent tubing and TIG welded. Not only do they flow well

but look good too.

Material choices include mild steel or stainless steel. We

also work with QC Coatings if you are interested in having

them ceramic coated to reduce heat and extend the life of the headers.

In addition to making custom headers,

we also repair and modify existing headers. Dented or smashed, we can alter them so clearance is no longer an issue.

Custom Exhaust

Our exhaust systems are made like our headers.

Only mandrel bent tubing is used and they are TIG welded. Most systems are made using aluminized steel tubing or stainless steel.

Again, we work with QC Coatings for ceramic coating in black or silver.

We can build you an exhaust system size from 2" up to 5" and use mufflers from Flow Master, Borla or whoever you choose.

We also design and manufac-

ture our own exhaust cutouts which are made from stainless steel and machined so they will not leak. They are offered as a manual kit with a single handle under your seat or as an electric option with an actuator.

Custom Fabrication

We are not limited to just designing and fabricating exhaust systems. Over 30 years

of machining and welding experience and an equipment list that includes Bridgeport mills,

lathes, English wheels, multiple car hoists and a surface plate for chassis' allows us to meet our

customer's needs and requirements. If you're looking for someone who can fabricate

anything from full frames and roll cages to sheet metal work and machining details, then contact us to set up an appointment to review your project.
